

Traxx Mobility Systems TITAN 500 Patient Lift

The Titan 500 is made of strong, durable aluminum. Its innovative four point lift bar securely lifts a patient to 500 pounds. The soft, padded sling is easily positioned for lifting patients and the hand held remote is easy to operate and safe near water. Easily installed in any room in just minutes, the Titan 500 is freestanding, battery operated and runs for days after a power loss, and is easily recharged.

The satin anodized finish makes it easy to clean and the sling is machine washable and quick drying.

Traxx Mobility Systems TITAN 500

- Helps eliminate injuries and increase efficiency with a push of a button.
- Provides greater satisfaction for the caregiver and the patient.
- Only one caregiver needed for safe patient transfer.
- Experience greater safety, comfort, and mobility.
- Freestanding system that can be easily stored.
- System accommodates everything from private homes to hospitals, including bariatric patients.
- Installs in minutes and is easy to move and re-install in new location.
- The lift motor is battery powered and easily recharged, no manual pumping required compared to the Hydraulic Patient Lifts.
- The sling design combines strategically placed padding and adjustable straps.
- Machine washable sling, dries quickly and is mildew resistant.
- The four point lift bar insures a stable, secure and comfortable experience.
- Works well on carpet compared to the floor-based Hoyer PatientLift.
